Grene A/S uses advanced machines running on hydrogen using their own "hydrogen-station" today.

Grene A/S has more than 40,000m² indoor stock containing a 3,000m² fully automated stock and a 2,500m² outdoor stock. Grene A/S has more than 100,000 part no. and 13,000 pallets to handle.

Teamleader Mr. Manse Buur Davis is responsible for Incomming goods, unpacking and quality. In february 2008, Grene A/S purchased a Segway i2 for Mr. Davis.

Manse Buur Davis: "My office is relatively far away from the stock. So our goal was to make my roundtrips in the stocks faster and more efficient and in general be able to give a faster response on situations. With the Segway i2 my expectations were completely fulfilled and no other similar equipment was able to do that so far".

Manse Buur Davis: "Several tests told us that my daily walking distance would be up to 25-30 km."

"I am now using the Segway i2 and it has been positive to experience how easy it is to handle among all our other machines. **To implement the Segway in our company has been surprisingly positive.**"

"I can almost use the Segway everywhere and it is fast. Furthermore, the Segway i2 is smart, innovative, and efficient. The Segway i2 fits in perfectly almost everywhere and it fits perfectly into my job."

Manse Buur Davis: "Our Segway has been defective twice since February 2008. When it is not around you really notice how much you are missing it. But there is **practically no maintenance and besides the charging power we have had no operational costs**".

Manse Buur Davis, Teamleader by Grene A/S: "With the Segway i2 my expectations were completely fulfilled and no other similar equipment was able to do that so far".
